Welcome to our New Members!

(in order to activate membership, applicants need to attend one general meeting or volunteer to help at a VHOC event)

Jeri Embrey and her Labrador Retriever "Jesse"

Training Site Rules

Please remember that training on the grounds of Canoga Park Lutheran School is a privilege that has been granted to our club. In order to maintain that privilege, strict adherence to the rules outlined below is necessary. We ask for everyone's cooperation so that all club members can continue to benefit from the use of our wonderful training facility. Thanks in advance for your help and understanding!

School Rules

- VHOC members and students are allowed access to the school grounds from 6:00 p.m. to 9:30 p.m. on Tuesdays, Wednesdays and Thursdays. Please do not plan to arrive early or stay late.
- Parking within the school grounds is reserved for VHOC members and instructors. Non-member students attending the Basic Obedience & Manners classes are asked to park outside of the parking lot (there is usually ample parking on Jordan Ave.)
- Training or playing on the grass area is restricted to VHOC members and those students whose classes are held on the grass. Students whose classes are held on the blacktop are asked to potty their dogs outside of the training facility. Guests without their canine companions are welcome to observe individual training or classes.

• Everyone MUST be responsible for picking up after his or her dog(s) and disposing of all waste by taking it with you. DO NOT TOSS ANY DOG WASTE IN THE SCHOOL TRASH CANS! No exceptions!

(Apparently there has been some laxness on this—please pick up your dog 's waste)

- Dogs are not allowed in the planter areas at any time. Members are asked to potty their dogs along the outer perimeter of the field.
- Dogs are not allowed inside the gymnasium (or other school buildings) at any time, for any reason.
- Dogs are to be under the control of the owner/handler at all times.
- Dogs must be contained in a crate or X-pen when not being actively handled.
- Excessive barking will not be tolerated.

Students are responsible for setting up and breaking down any equipment that might be required for their class.

SATURDAY, AUGUST 20 4:00*—8:30PM

VHOC Training Site: 7326 Jordan Ave, Canoga Park

Nested courses
Treats & toys allowed
JOIN US!

All skill levels welcome!

Questions? Contact Nancy:
ngiltner623@gmail.com

\$6, 1st run; \$4, additional runs (same dog)

***Participants can begin to set up at 3:45.**

One standard and one jumpers course, nested (3 levels each), on grass.

Dogs must be crated or on leash when not in the ring.

See www.vhoc.org for site rules.

Cars Heat Up Quickly

Whatever the temperature outside, parked cars heat up quickly in the sun. Their metal frames work like a solar collector to raise the temperature and turn the interior into a giant oven.

Even when you think it's cool enough outside, don't leave your dog alone in an enclosed car. A parked car in the shade also can get very hot very quickly. And leaving a window open a crack doesn't help.

According to research from San Francisco State University, when the outside air temperature is a mild 70 degrees, within 10 minutes the temperature inside a parked car will rise to 89 degrees. After 40 minutes, it shoots up to 108 degrees and it's likely the dog will die of heat stroke.

When it's 90 degrees out, just 10 minutes in a car can be fatal to a dog.

Estimated Vehicle Interior Air Temperature v. Elapsed Time

Elapsed Time	Outside Air Temperature (F)					
	70	72	80	85	90	95
0 minutes	70	72	80	85	90	95
10 minutes	89	94	99	104	109	114
20 minutes	99	104	109	114	119	124
30 minutes	104	109	114	119	124	129
40 minutes	108	113	118	123	128	133
50 minutes	111	116	121	126	131	136
60 minutes	113	118	123	128	133	138
> 1 hour	115	120	125	130	135	140

[Lumps and Bumps on Your Dog or Cat](#)

http://drjeandoddspethealthresource.tumblr.com/post/145819258341/lumps-on-dog-cat?soc_src=mail&soc_trk=ma#.V2nKszVXLRk

If you find a lump or a bump either on or underneath the skin of your dog or cat, you may want to rush to the internet to find out what it is. The problem is that many of the possible reasons look identical, which may result in undue panic. So, images are unreliable. In fact, look at the photos of diagnosed conditions that our readers provided and even you can be confused.

At the end of this article, I have included a reference list of common lumps and bumps. First, I would like to discuss initial steps to take and three common conditions: 1). Subcutaneous (under the skin); 2). Cutaneous (on the skin); and 3). Omnipresent.

First Step

If you find a lump or a bump under the skin or on the skin, I strongly encourage you to make an appointment with your veterinarian. Your veterinarian usually will advise a fine needle aspiration, which is just a very thin needle that draws some substance from the mass. It is the initial diagnostic tool to finding out if the formation is benign (non-cancerous), pre-cancerous, cancerous or something just a little suspicious that needs further investigation. While some veterinarians may adopt a “wait and see” policy, I believe we need to pursue suspicious masses early.

Here is an excellent example. Dr. Susan Ettinger, a veterinary oncologist, wrote a heartfelt article about complacency. She fully admitted she also fell into the trap. She was seeing a dog, Smokey,

Lumps and Bumps - con't.

for several years that had noncancerous fatty tumors or just regular lumps. Smokey developed a new lump but the practice became overwhelmed the day he came in, so she did not make time to perform an aspirate. She assumed it was fine but had him return the next week. Turns out, this new lump was cancerous but was fortunately of low-grade and caught early enough. She still felt horrible.

Fatty Tumors (Lipomas)

Lipomas are benign non-cancerous fatty soft tissue globs that lie just underneath the skin or can grow down into the muscle. Typically, we think of certain breeds that are older, overweight and larger as the most prone to

lipomas but any dog, of any age, any size, and any breed can develop a lipoma.

Western medicine generally likes to remove fatty tumors. I disagree with this treatment protocol unless the tumor is impeding mobility, pressing on an internal organ, pinching a vein, or affecting quality of life. It is unnecessary to put a dog under anesthesia since lipomas do not become cancerous. (But, Liposarcoma is a malignant fatty tumor.) Other treatment options include steroid injections (not advisable), and liposuction. Holistic veterinarians may use therapies such as chiropractic care, acupuncture, liposuction, supplements or probiotics to reduce the size of the lipoma.

My esteemed colleague, Dr. Marty Goldberg, asserts that lipomas are caused by an excessive amount of grain found in dogs' diets these days that leads to improper fat digestion and an imbalance of the immune system. Indeed, other holistic practitioners maintain that the body is attempting to rid itself of toxins by pushing them away from the vital organs instead of through normal processes.

While some conventional veterinarians will maintain the standard line that all dogs can get lipomas no matter what you do, holistic practitioners seek ways to prevent them as much as possible.

- Feed a fresh, organic whole foods diet.
- Give milk thistle, curcumin and other [detoxifiers](#) to improve liver function.
- Minimize vaccines and use Thuja and Lyssin to help prevent vaccinosis.
- Detoxify your companion pet's environment.

Lumps and Bumps - con't.

Sebaceous Cysts

Colloquially, epidermal inclusion cysts are called sebaceous cysts. They are benign, very common in dogs, but rare in cats. What happens is that when a hair follicle is damaged, the epidermal cells (outer layer of skin cells) wall it off and secrete keratin into it. Keratin is a fibrous protein that is found in hair, fingernails, claws, hooves, etc. Most of the time, the body isolates and resolves the problem on its own.

Caution: these cysts can come to a head. I ask you to suppress your urge to pop it. Squeezing it can release the granular and cheesy feeling, brown or yellowish colored keratin into the surrounding tissues causing a severe inflammatory response and leading to cellulitis. Your pet may then need a round of antibiotics. If your veterinarian has chosen to wait after a fine needle aspiration confirmed that it is not cancerous, that is perfectly fine. However, if it erupts or appears that it might erupt, please take your companion pet to the veterinarian and have him take care of it.

I agree with Dr. Karen Becker that preventative measures such as regular grooming, adding fish or coconut oil to your pet's diet should be employed.

Mast Cell Tumors (Mastocytoma)

Mast cell tumors (MCT) are annoying and aggravating; they are one of the most common types of canine cancer. Felines, too, are prone to this cancer. Often called "the great pretender", MCT can take any shape and any form; can be located under the skin, in the skin, on the skin or embedded deep in the body. Essentially, they are camouflaging themselves as another condition. They can be non-cancerous (benign), but are usually cancerous (malignant). They can be localized or can spread throughout the body (metastasize). They generally spread by the lymphatic system but not always. They can get bigger or smaller. On top of that, we do not know the underlying cause that provokes mastocytoma to develop but do know about some relevant genetic mutations.

Most importantly, I want to emphasize that MCT can present upon examination exactly like a lipoma, epidermal inclusion cyst, or any of the other conditions listed below. So, again, we need to aspirate the lump to make sure it is not malignant.

If the tumor is diagnosed as malignant, treatment protocols are best discussed with a veterinary oncologist. Cancer is a big topic, but I want to point out the benefits of anti-angiogenesis treatments. These FDA-approved drugs have been proven effective for several MCT sufferers, particularly those that have the c-Kit mutation. As well, continued therapy with these drugs has been shown to stave off recurrence of the disease.

Lumps and Bumps - con't.

What is angiogenesis? Angiogenesis is the growth of new capillary blood vessels in the body. We definitely need them for healing and reproducing. However, if the regulation of these blood vessels is disturbed, the body can have a deficiency or excess of them. If an excess exists, cancer feeds off them. Antiangiogenic therapy interferes with the process of blood vessel growth to starve the tumor of its blood supply.

As the eminent Dr. William Li, President and Medical Director of The Angiogenesis Foundation, adroitly points out: once cancer diagnosis is made, we are playing catch up with the disease. Why not seek out preventative techniques?

In humans, he realized that diet accounts for 30-35% of environmentally-based cancers. Instead of wondering what we could remove, he wondered if foods had antiangiogenic properties that literally starve cancer. His team proved that countless foods contain these properties. Here is an abbreviated list that works for dogs so long as they do not have a food sensitivity:

- Apples
- Avocado
- Blackberries
- Blueberries
- Coconut
- Cranberries
- Pears
- Bok choy
- Cherries
- Curcumin (turmeric)
- Ginseng
- Kale
- Lavender
- Maitake mushrooms
- Olive oil
- Parsley
- Pumpkin
- Sea cucumber
- Asparagus
- Broccoli
- Spinach
- Honey
- Anchovies
- Sardines
- Dark Turkey
- Salmon
- Dark Goose
- Peanuts
- Lentils

Lumps and Bumps - con't.

Appendix of Tumors

- Mast Cell Tumors
 - Fatty Tumors (lipomas)
 - Liposarcoma
 - Sialoceles
 - Squamous cell carcinoma
 - Adenocarcinomas
 - Fibromas
 - Fibrosarcoma
 - Melanomas
 - Melanosarcoma
 - Histiocytoma
 - Transmissible venereal tumor (TVT)
 - Plasmacytoma
 - Hemangiopericytoma
 - Sebaceous Cysts (actually, the true condition is epidermal inclusion cysts) – noncancerous
 - Sebaceous Adenomas – noncancerous
 - Warts
 - Soft Tissue Sarcoma
 - Meibomian Gland Adenoma
- ...and more

Garden Grove, CA 92843

Carole Raschella is a member of VHOC and a Director of the California Federation of Dog Clubs. Whittier did a great service to it's community in **not allowing** the mandatory spay/neuter law to be approved, and creating a great dog park.

Whittier, California Declared AKC Dog Friendly City

Whittier, California Declared AKC Dog Friendly City 19 July 2016

Whittier, California Declared AKC Dog Friendly City

By: [Government Relations Department](#)

The California Federation of Dog Clubs presented the American Kennel Club's Dog Friendly City Award to the Whittier Mayor and Council at the new Whittier Dog Park.

*From left to right: **CFoDC Director Carol Raschella**, CFoDC President Chuck Bridges, CFoDC Vice-President Judythe Coffman, CFoDC Director Connie Koehler, Councilman Fernando Dutra, Mayor Joe Vinatieri, AKC Sr. Legislative Analyst Sarah Sprouse, Councilman Josue Alvarado. CFoDC Team Members not pictured: CFoDC Director Carol Hamilton, Whittier resident and President of the Irish Setter Club of Southern California Nancy Fenoglio and Whittier Resident Dr. Dennis Voorheis.*

The American Kennel Club (AKC) is pleased to announce that Whittier, California has been awarded the AKC's Dog Friendly City Award in recognition of their support of responsible dog owners and breeders in the city. The California Federation of Dog Clubs was able to formally present this award to Mayor Vinatieri as well as Councilmembers Fernando Dutra and Josue Alvarado at the city's new dog park.

Whittier, California Declared AKC Dog Friendly City—Cont.

The Whittier City Council worked closely with the American Kennel Club's federation, the California Federation of Dog Clubs (CFoDC), in 2015 to approve an ordinance which protects responsible dog owners.

"We were very impressed by the information compiled and presented [by the California Federation of Dog Clubs]. They truly did their homework and were polite and respectful in their presentation to the council. They took the time to educate us and to involve local Whittier residents which really meant a lot to us," said Mayor Joe Vinatieri.

The CFoDC members were impressed with the council's attention to detail and their quest to educate themselves about an issue that affects the quality of life of many Whittier residents. The city had originally considered adopting the same mandatory spay/neuter ordinance as Los Angeles County but when presented with information about the negative health effects of early spay/neuter, the corresponding decrease in licensing compliance and the way in which these policies disproportionately impact low-income pet owners, the city reversed course on that portion of the proposal.

"CFODC lent critical support to local dog fanciers with our extensive knowledge base, our organizing experience, and our 'boots on the ground.' We were pleased that Mayor Viniatieri and Council Member Dutra reiterated their gratitude to our team for giving them the tools with which to make an informed decision to benefit their city. Having the Whittier community come together – the council members and the dog-owning citizens – was truly gratifying. I can't think of a better way of celebrating this win-win for Whittier than presenting this award at the city's new dog park," said CFODC President Chuck Bridges.

Whittier is only the second city to receive this prestigious honor. The recent opening of the Whittier Dog Park further exemplifies the city's commitment to providing recreation and socialization opportunities for the canine members of the community and their owners.

In recognition of their dedication to making Whittier a wonderful community for dogs and their owners, the American Kennel Club is pleased to present the city with the AKC Dog Friendly City Award.

FIRST CLASS MAIL

TO:

VHOC December 10 and 11, 2016 Obedience and Rally Trial

It is that time of year again.

I have sent out some email messages to those of you that have sponsored the awards for classes before.

I have heard back from some sponsors, but

Please let me know if you want to continue sponsoring.

Once I have everyone signed up that wants to repeat their sponsorship I will open it up to everyone else.
